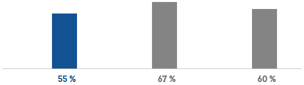
Timely & Effective Care

Hospitals and healthcare providers play a crucial role in promoting, providing and educating patients about preventive services and screenings and maintaining the health of their communities. Many diseases are preventable through immunizations, screenings, treatment, and lifestyle changes. The information below shows how well the hospitals you selected are providing preventive services.

Sepsis

Sepsis is a complication that occurs when your body has an extreme response to an infection. It causes damage to organs in the body and can be life-threatening if not treated. Sepsis can sometimes turn into septic shock, which has a higher risk of death. Identifying sepsis early and starting appropriate care quickly increase the chances of survival. **How this page works »**

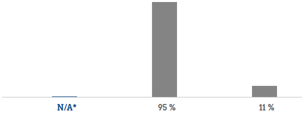
Measure	Jackson Health System	Florida Avg.	National Avg.	More Info
Percentage of patients who received appropriate care for severe sepsis and septic shock	55 %	67 %	60 %	**Higher is Better** **12 % Lower** than Florida average. **5 % Lower** than National average. Date Range: 10/2019 - 9/2020



Cataract Surgery Outcome

Cataracts affect your vision and are very common in older people. Cataracts can make your vision blurry and can impact your ability to see at night. The purpose of cataract surgery is to improve visual function and quality of life. **How this page works »**

Measure	Jackson Health System	Florida Avg.	National Avg.	More Info
Percentage of patients who had cataract surgery and had improvement in visual function within 90 days following the surgery **Results are not available for this reporting period.*	N/A*	95 %	11 %	**Higher is Better** Date Range: 1/2019 - 12/2019

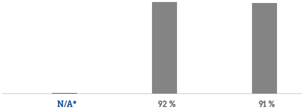


Colonoscopy Follow-Up

A colonoscopy is one test doctors can use to find precancerous polyps (abnormal growths) or colorectal cancer. Scientific evidence shows that the following measures represent best practices for follow-up colonoscopies. **How this page works »**

Measure	Jackson Health System	Florida Avg.	National Avg.	More Info

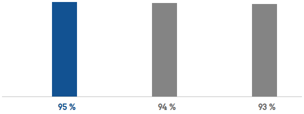
Percentage of patients receiving appropriate recommendation for follow-up colonoscopy screening



Higher is Better

Date Range:
1/2019 - 12/2019

Percentage of patients with history of polyps receiving follow-up colonoscopy in the appropriate time frame



Higher is Better

1 % Higher

than Florida average.

2 % Higher

than National average.

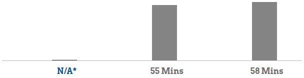
Date Range:
1/2018 - 12/2018

Heart Attack Care

An acute myocardial infarction (AMI) or heart attack happens when one of the heart's arteries becomes blocked and the supply of blood and oxygen to part of the heart muscle is slowed or stopped. When the heart muscle doesn't get the oxygen and nutrients it needs, the affected heart tissue may die. These measures assess the extent to which some of the recommended treatments are provided, if appropriate, for most adults who have had a heart attack.
Acronyms: ECG - Electrocardiogram **How this page works »**

Average (median) number of minutes before patients with chest pain or possible heart attack who needed specialized care were transferred to another hospital

**Results are based on a shorter time period than required. No cases met the criteria for this measure.*

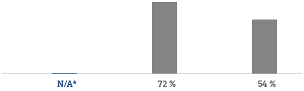


Lower is Better

Date Range:
10/2019 - 9/2020

Outpatients with chest pain or possible heart attack who got drugs to break up blood clots within 30 minutes of arrival

**Results are not available for this reporting period.*



Higher is Better

Date Range:
10/2019 - 9/2020

Emergency Department Care

Jackson Health System provides 24/7 emergency care for a diverse patient population throughout Miami-Dade County. We see a high volume of both urgent and critically ill adult and pediatric patients and are able to provide support from specialists in all fields of medicine. **How this page works »**

Measure	**Jackson Health System**	**Florida Avg.**	**National Avg.**	**More Info**
Percentage of patients who left the emergency department before being seen	 N/A*	1 %	2 %	**Lower is Better** Date Range: 1/2019 - 12/2019
Percentage of patients who came to the emergency department with stroke symptoms who received brain scan results within 45 minutes of arrival	 N/A*	76 %	72 %	**Higher is Better** Date Range: 10/2019 - 9/2020
Average (median) time patients spent in the emergency department, after the doctor decided to admit them as an inpatient before leaving the emergency department for their inpatient room	 371 Mins	114 Mins	134 Mins	**Lower is Better** **257 Mins Higher** than Florida average. **237 Mins Higher** than National average. Date Range: 1/2019 - 12/2019
Average (median) time patients spent in the emergency department before leaving from the visit	 234 Mins	144 Mins	143 Mins	**Lower is Better** **90 Mins Higher** than Florida average. **91 Mins Higher** than National average. Date Range: 10/2019 - 9/2020

Preventive Care

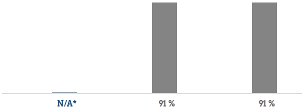
Hospitals and healthcare providers play a crucial role in promoting, providing and educating patients about preventive services and screenings and maintaining the health of their communities. Many diseases are preventable through immunizations, screenings, treatment, and lifestyle changes. The information below shows how well the hospitals you selected are providing preventive services. **How this page works »**

Measure	**Jackson Health System**	**Florida Avg.**	**National Avg.**	**More Info**
Healthcare workers given influenza vaccination	 55 %	82 %	91 %	**Higher is Better** **27 % Lower** than Florida average. **36 % Lower** than National average. Date Range: 10/2019 - 3/2020

Cancer Care

External Beam Radiation Therapy (EBRT) uses high doses of radiation to destroy cancer cells and shrink tumors. It is commonly used in patients with cancer that has spread to the bone as a method to control pain with few side effects. Evidence has shown that short-term radiation treatment can have similar pain relief outcomes to long course treatment. The measure below shows how often patients receive the recommended EBRT radiation treatment. **How this page works »**

Measure	Jackson Health System	Florida Avg.	National Avg.	More Info
Percentage of patients receiving appropriate radiation therapy for cancer that has spread to the bone **Results are not available for this reporting period.*	N/A*	91 %	91 %	**Higher is Better** Date Range: 1/2019 - 12/2019



Pregnancy & Delivery Care

By adhering to best practices for maternity care, hospitals can improve the chances for a safe delivery and a healthy baby. This measure shows the percentage of pregnant women who had elective deliveries 1-3 weeks early (either vaginally or by C-section) whose early deliveries weren't medically necessary. Higher numbers may indicate that hospitals aren't doing enough to discourage this unsafe practice. **How this page works »**

Measure	Jackson Health System	Florida Avg.	National Avg.	More Info
Percent of mothers whose deliveries were scheduled too early (1-2 weeks early), when a scheduled delivery was not medically necessary	0 %	2 %	3 %	**Lower is Better** **2 % Lower** than Florida average. **3 % Lower** than National average. Date Range: 10/2019 - 9/2020

Use Of Medical Imaging

These outpatient imaging efficiency measures give you information about hospitals' use of medical imaging tests (like mammograms, MRIs, and CT scans) for outpatients based on the following goals:

- Protecting patients' safety (like keeping patients' exposure to radiation and other risks as low as possible);
- Following up properly when screening tests like mammograms show a possible problem; and,
- Avoiding the risk, stress, and cost of doing imaging tests that patients may not need.

How this page works »

Measure	Jackson Health System	Florida Avg.	National Avg.	More Info
Outpatients with low-back pain who had an MRI without trying recommended treatments (like physical therapy) first *If a number is high, it may mean the facility is doing too many unnecessary MRIs for low-back pain.* **The number of cases/patients is too few to report.*	N/A*	37.9 %	38.5 %	**Lower is Better** Date Range: 10/2019 - 9/2020
				Lower is Better

Outpatient CT scans of the abdomen that were “combination” (double) scans

If a number is high, it may mean that too many patients have a double scan when a single scan is all they need.

1.2 % Lower

than Florida average.

1.7 % Lower

than National average.

Date Range:
10/2019 - 9/2020

Outpatients who got cardiac imaging stress tests before low-risk outpatient surgery

If a number is high, it may mean that too many cardiac scans were done prior to low-risk surgeries.

Lower is Better

3.5 % Lower

than Florida average.

2.7 % Lower

than National average.

Date Range:
10/2019 - 9/2020
